THE CYLINDERTRAY

- Gives early warning of leaking cylinders.
- Tray is designed to contain dripping water from the bottom of corroding cylinders and discharge it to outside via standard solvent weld overflow pipe.
- Will take 18inch diameter foam lagged cylinder.
- Install on flat level surface only.
- Place cylinder central on tray.
- Keep away from direct sources of heat.
- Run overflow to outside and terminate in highly visible area.
- Periodically check tray inside for damp or wet patches. Visually check overflow pipe outside building for dripping and overflowing. This indicates cylinder leakage. Implement immediate rectifying action.
- Flush overflow pipe through periodically check for unrestricted passage of water.
- We reserve the right to alter tray specification without prior notice.
